Oracle NetSuite Financial Management

> 66 NetSuite Financials is a cloud-based accounting software that provides a suite of financial management applications.

The General Ledger (GL) is for all financial transactions. It provides a complete audit trail of all transactions and allows you to create financial statements such as balance sheets and income statements.
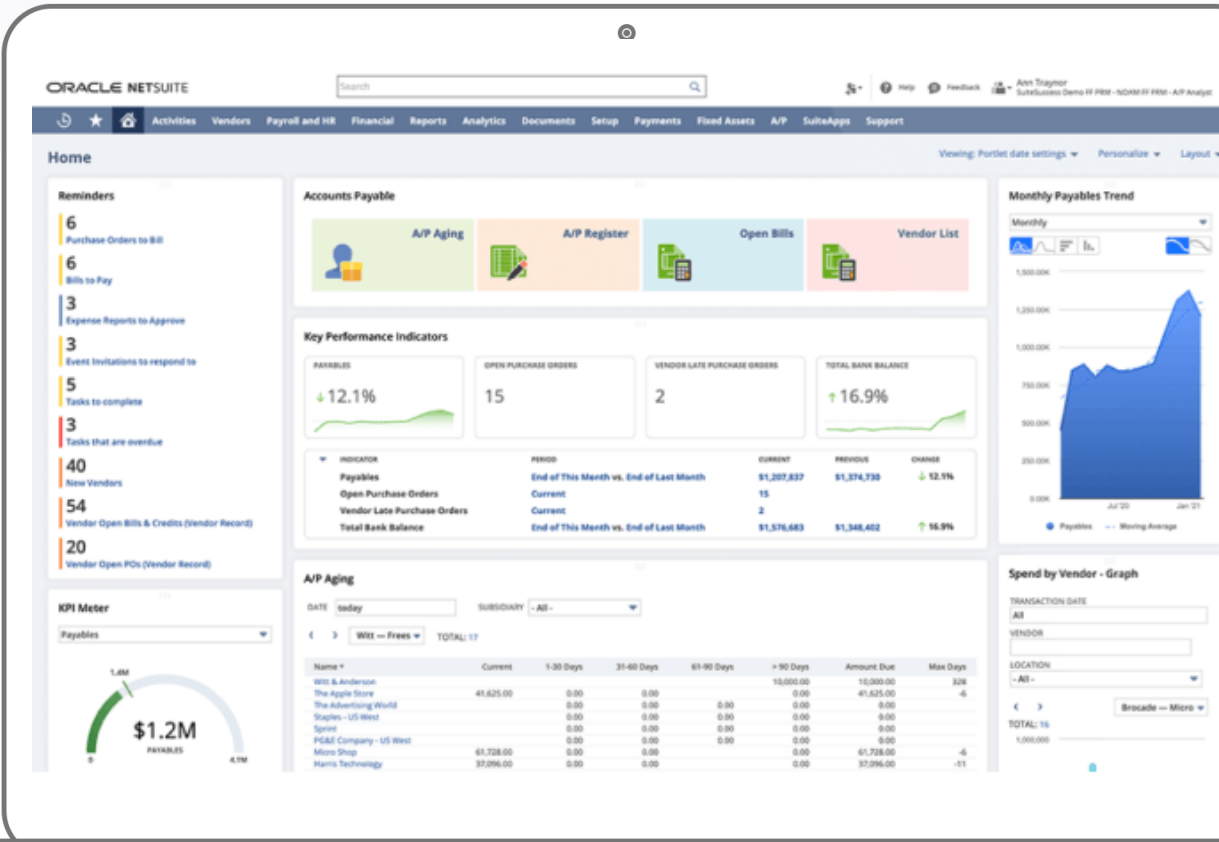

Accounts Payable (AP) is used to manage vendor bills and payments. It allows you to track vendor bills, create purchase orders, and manage payments.

Accounts Receivable (AR) is used to manage customer invoices and payments. It allows you to track customer invoices, create sales orders, and manage payments.

Fixed Assets Management automates the management of fixed assets acquisition, depreciation, revaluation, and retirement, as well as maintenance schedules and insurance.

Oracle NetSuite Construction Management

Job Costing: Set up to 16 customer defined, material job cost metrics, e.g: Labour, Material costs.

Project Budgeting: Track allocated budgets at project and task level

Project Billing: Automatically generates a summary billing record for each period within a project

Estimate to Project Sync Automatically convert estimates and change orders to project resource tasks for labor.

Project Tasks: Automatically Convert service type of work on the estimate to project task and assignment in NetSuite projects.

Real Time Project Financials

Project Accounting

Job Cost Reporting

Progress Revenue Recognition

Earned Value

Cost budgeting, forecasting and billing

Actual and forecasted profit

Change Order, estimate-at-completion
